

LCD Driver

- Controls up to 128 segments (CP2400/1) or 64 segments (CP2402/3)
- Supports static, 2-mux, 3-mux, and 4-mux displays
- On-chip bias generation with internal charge pump
- Low power blink capability

GPIO Expander

- Expands GPIO count by up to 36 pins (CP2400/1) or 20 pins (CP2402/3)
- Up to 5 GPIO/port match wake-up sources
- 5 V Tolerant I/O

Real Time Clock, SmartClock

- Precision time keeping with 32.768 kHz watch crystal; self-oscillate mode requires no external crystal; accepts external 32 kHz CMOS clock
- 36-hour programmable counter with wake up alarm
- Can wake up the host controller using interrupt pin

256 Bytes RAM

- General purpose RAM expands the memory available to host controller.

16-bit Timers

- Two general purpose 16-bit timers

Clock Sources

- 20 MHz Internal oscillator
- Can be clocked from an external CMOS clock

Digital Bus Interface

- 4-wire SPI Interface operates up to 2.5 Mbps with synchronous external clock or up to 1 Mbps with internal clock (CP2400/2)
- 2-wire SMBus/I²C Interface operates up to 400 kHz with internal clock (CP2401/3)
- Dedicated RST and INT pins
- Optional CLK pin can be used as CMOS clock input
- Optional PWR pin (SMBus/I²C devices only) places the device in a low power mode. SPI devices use the NSS pin to place the device in a low power mode.

Low Power

- 1.8–3.6 V operation with integrated LDO
- Ultra-low power mode w/ LCD (2.2 μ A typical)
- Shutdown current (0.05 μ A typical)

Example Applications

- Handheld equipment
- Utility meters
- Thermostat display
- Home Security systems

Package Options (RoHS-Compliant)
